

Proposed changes to Strategic Options Document (Improving Public Education)
(Changes are highlighted)

1. Improving Public Education

1.a. Continue to improve educational outcomes for students at all levels.

1.a.1. Move to reduce student-teacher ratios across all grades (for example, if student-teacher ratios were 20:1 for K-3 and 22:1 for all other grades, the cost per household would be XXX) (Provide some appended background for people to understand what would be required—and the assumptions included—to cost out that outcome.)

1.a.2. Make teacher salaries competitive with comparable communities. (Provide appended information—or simple description—of what were considered comparable communities and used to develop this cost example.)

1.a.3. Same

1.a.4. Same

1.a.5. Improve educational outcomes and increase one-on-one teacher time by implementing integrated e-learning principles in high school initially, including teacher professional development, improving the student-to-computer ratio and integrated e-learning curriculum. For example, if student-to-computer ratio at the high school was 1:1—a computer for every student, the cost per household would be XXX).

1.a.6. Same.

1.b. Increase the engagement between the community and the schools.

1.c. Build a new high school (no change, but make sure cost assumptions are spelled out).

1.d. No change

1.e. No change

1.f. No change
